Petersburg Children's Center

Facility Expansion Sprinkler System & Alarm

Expansion allows for enrollment of 20 addition kids.

As part of the expansion of the Petersburg Children's Center, several health and safety improvements to the building were made, including installation of a required fire suppression system.

PCF funds were used specifically to cover the cost of a required fire suppression system.

The Children's Center was able to pool together a combination of two significant grants, several small grants and donations, and fundraisers to raise necessary funds for the project. This project also received tremendous support from individuals and businesses in the community who donated funds and volunteered time and materials to make the project successful.
